

Create N8N Account(14 days trial)

Objective: Enable learners to access and start using n8n's workflow automation platform via the free trial account.

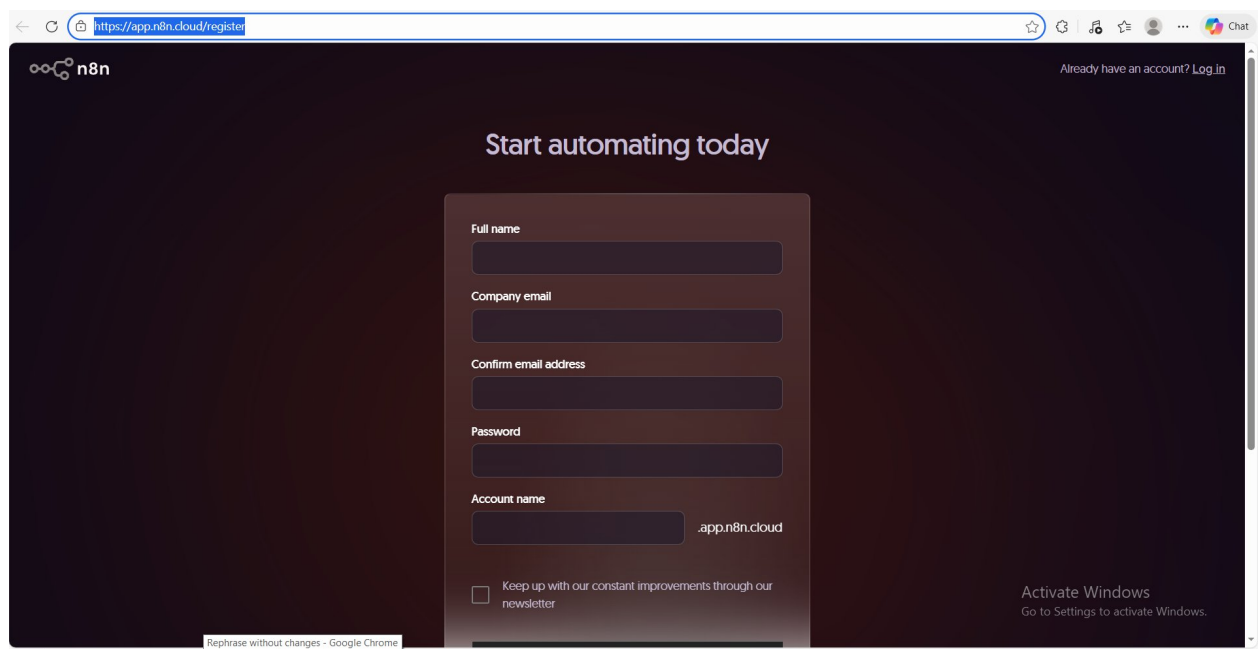

Prerequisites

- Active internet connection
- Modern browser (Chrome, Edge, or Firefox)
- Personal email ID for registration

Steps

1 Access n8n

- Open browser and go to: <https://n8n.io>
- Click **Sign Up / Get Started for Free** n8n.cloud

A screenshot of a web browser showing the n8n registration page. The browser's address bar displays 'https://app.n8n.cloud/register'. The page has a dark background with the n8n logo in the top left and a link 'Already have an account? Log in' in the top right. The main heading is 'Start automating today'. Below this is a registration form with the following fields: 'Full name', 'Company email', 'Confirm email address', 'Password', and 'Account name'. The 'Account name' field has a dropdown menu currently showing '.app.n8n.cloud'. At the bottom of the form is a checkbox labeled 'Keep up with our constant improvements through our newsletter'. In the bottom right corner of the page, there is a 'Activate Windows' watermark with the text 'Go to Settings to activate Windows.'

2 Register Free Account

- Enter **Email Address**
- Set a **secure password**
- Setup unique **Account Name**

- Agree to **Terms of Service** and **Privacy Policy**
- Click **Sign Up**

You will receive a verification email.

3 Verify Email

- Open your email inbox
- Find the verification email from n8n
- Click **Verify Email** link

4 Login to n8n

- Return to <https://n8n.io>
- Click **Login**
- Enter your registered **email** and **password**
- Click **Sign In**

5 Access Free Tier

- After login, you will be redirected to the n8n dashboard
- You are now on the **Free Tier** with access to basic workflow creation and integrations

Qdrant Setup & API Key Generation

What is Qdrant?

A vector similarity search engine that provides a production-ready service with a convenient API to store, search, and manage points (i.e. vectors) with an additional payload.” You can think of the payloads as additional pieces of information that can help you hone in on your search and also receive useful information that you can give to your users.

Objective: Enable learners to set up a Qdrant instance and generate an API key to use as a vector database in their agentic workflows.

Prerequisites

- Active internet connection
- Modern browser (Chrome, Edge, or Firefox)
- Personal email ID for registration

Steps

1 Access Qdrant Cloud

Open browser and go to: <https://qdrant.tech/>

- Click **Sign Up / Get Started for Free**
-

2 Register Free Account

- Enter **Email Address** and **Password**
- Agree to **Terms of Service** and **Privacy Policy**
- Click **Sign Up**

You will receive a verification email.

To set it up:

1. Go to the [Cloud Dashboard](#).
2. Select **Access Management** to display available API keys (or go to the **API Keys** section of the **Cluster detail** page).
3. Select **Create**.
4. Select the cluster you want the key to have access to in the dropdown.

5. Select **OK**.
6. Copy the API Key and save it somewhere for further use.
7. Copy the End point URL for your Qdrant cluster and save it for further use.

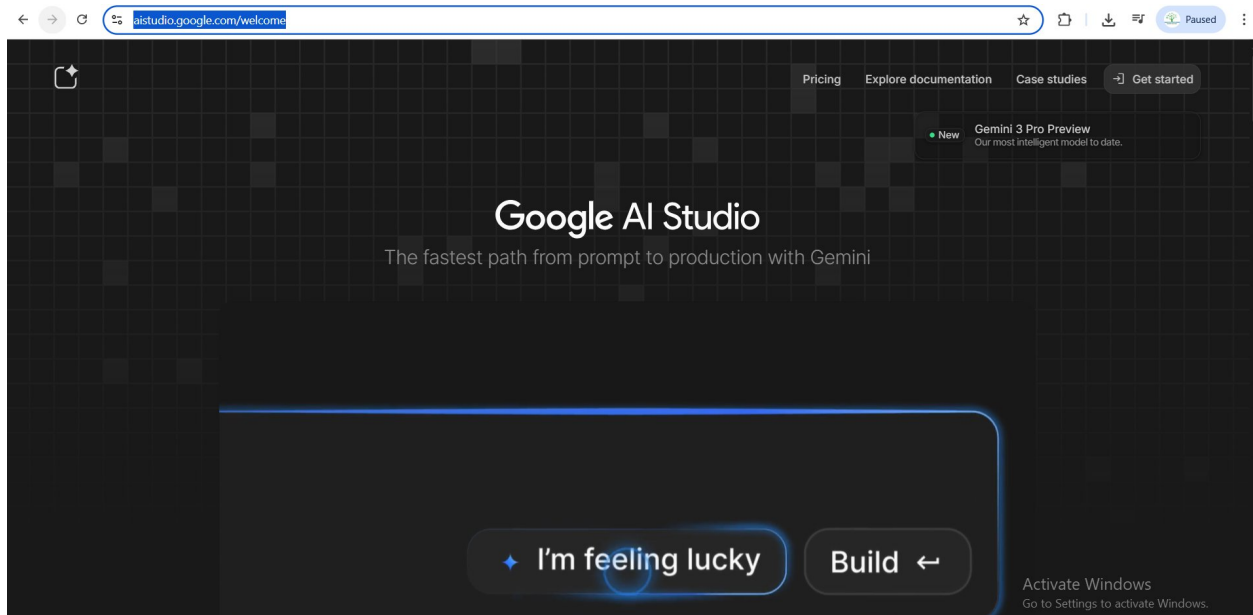

QDRANT_API_KEY=your_generated_api_key

QDRANT_URL=https://<your-project-name>.qdrant.cloud

Setup Gemini API Key

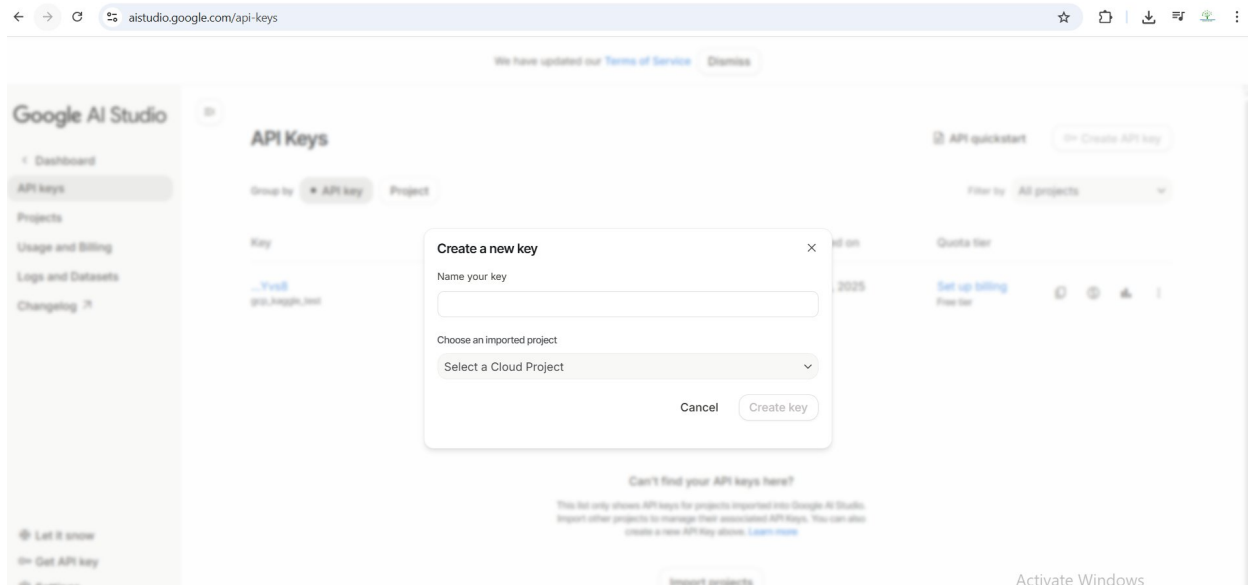

Steps for Free tier Gemini AI key setup:

<https://aistudio.google.com/welcome>

Click get started

Login via your gmail id once logged in click create API

Select/Create cloud project if not give any name

Then copy your API key into your .env file to use it anywhere needed

GOOGLE_GENAI_USE_VERTEXAI=FALSE

GOOGLE_API_KEY="paste ur key"

Keep your API key secure

Treat your Gemini API key like a password. If compromised, others can use your project's quota, incur charges (if billing is enabled), and access your private data, such as files.

Critical security rules

- **Keep keys confidential:** API keys for Gemini may access sensitive data your application depends upon.
 - **Never commit API keys to source control.** Do not check your API key into version control systems like Git.
 - **Never expose API keys on the client-side.** Do not use your API key directly in web or mobile apps in production. Keys in client-side code (including our JavaScript/TypeScript libraries and REST calls) can be extracted.
